

Size of Project

46 Duo panel workstations
2 Executive Offices
Utilities area
General storage solutions

Designer In Colour In Design

Colour Consultant Liz Gibbesson of In Colour In Design.

Project Manager Robert Fraser of Nextstep

Top Line objectives

Alstom's main objective was to create a higher density floor plate for the increase in employees and departments as the business is undergoing growth.

Alstom's other objective was to increase the amount of natural light throughout the office area.

Natural light had been an issue so wall panel heights were to be lowered and the client specified one wall height

Existing workstations were tired and required updating.

Due to the nature of their business, storage was a major factor for Alstom.

OHS management of power and data cables

Outcomes

Alstom achieved its objectives by updating the workstations and creating a fresh new work environment.

Alstom removed existing partitioning and replaced it with workstations.

Workstations were specified with lower screen heights and light fabric on both sides of wall panels allowing for natural light to flow and reflect through the office.

System Supply developed a workstation design to allow for extra bookcase storage within each workstation and function walls that included A4 document trays, bookbins and telephone trays to create more workable worktop area.

Liz Gibbesson the colour consultant and designer tied all workstations, storage and walls by including feature laminates in each area. This was achieved by having a woodgrain drawer fronts on pedestals and woodgrain door fronts on all storage cupboards positioned through the office.

With the choice of colours and natural light throughout the office the workplace has gone from dark to a fresh open plan office environment.

Power and data was repositioned from skirt level to above desk to allow easier access.
